EDUCATION

Luleburgaz Highschool
2010-2014

Computer Programming
Istanbul University - Cerrahpasa
2018-2020

ABOUT ME

I am a game developer with extensive experience in creating 2D and 3D games using Unity. I design innovative and educational projects for both computer and mobile platforms, actively participating in every phase of the game development process. Currently, I am looking to join a team where I can share my expertise and contribute to larger projects.

EXPERIENCE

With 4+ years of experience as a solo developer, I have been working on games using Unity for both Windows and Android/iOS platforms. Below, you can find some of my projects. For a detailed portfolio, please visit my website.

Various Jam Games (2020 -)

Since my early interest in game development, I have participated in various game jams as solo dev to challenge myself and have fun by creating entertaining games, which you can explore on my website.

Gobz: To The Moon (PC Game - 2022)

You need to reach the top of the platforms while game is constantly speeding up. The game is based on Icy Tower which released late 2001.

IV Girişimler Ciddi Oyunu (Mobile Serious Game - 2023)

A serious game project developed on demand as part of the Scientific Research Project (BAP) to assist university students in the health field with their education.

Thin Ice (Mobile Game - 2024)

Navigate the icy tiles in Thin Ice as you solve challenging puzzles to reach the exit. Strategically step on each block to avoid falling into the water and master the path to victory.

Gaming Cafe Simulator (Mobile Game - 2024)

This is a simulation game where players manage their own gaming cafe. As players earn revenue, they must expand their cafe and upgrade their products. Serve food, repair computers & more..

TikTok Content Games (2023 -)

I launched a TikTok channel where I create informative and entertaining videos focused on game development. I also made the games featured in these videos available for free download on itch.io.
